

Secure Your Home Network Devices

If you suspect that the device is infected, unplug it from the network immediately and shut down. After turn on the device, please follow tips in this infographics to protect your device.

Cover the camera and turn-off microphone that are not in use.

Change the default account and password.

Change the default Service Set Identifier (SSID) and disable the broadcast feature.

Switch off all devices that are not in use.

Install the latest software and firmware updates.

Enable MAC address filtering.

Turn on the built-in firewall on routers.

Enable the encryption function (e.g. WPA2 with AES) for Wi-Fi communications.

Disable unnecessary features and services (eg. remote management, Telnet).

Factory reset the devices before disposal.
